***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 8 and 12-15, drawn to a particular control device for a recording medium loading apparatus inclusive of prescribed driving forces and their associated relative magnitudes for loading a recording medium, classified in class 720, subclass 627.
- II. Claims 17-22, drawn to a particular disc detecting switch that comes into physical contact with a recording medium, classified in class 720, subclass 626.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a recording medium loading apparatus with a control device which does not require the specifics of a disc detecting switch, as set forth in Group II. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
